SKILLS

Generative AI
LLMs, RAG, LangGraph agents, QLoRA fine-tuning (SFT, DPO), vLLM, Mistral, evaluation (RAGAS, LLM judge)

Machine learning and data
Python, PyTorch, scikit-learn, XGBoost, Optuna, SQL, PostgreSQL, pgvector, FAISS, Airflow

MLOps and deployment
FastAPI, Docker, CI/CD with GitHub Actions, Azure, MLflow, Evidently, Grafana, pytest

Project management
Scoping, success criteria, budget, GDPR

TOOLS

Hugging Face · LangChain · Milvus · ONNX · Angular · Ruff · Git

SOFT SKILLS

Listening and customer advice: 16 years in specialised retail

Teaching and explaining clearly

Rigour: measure before claiming

Autonomy on end-to-end projects

LANGUAGES

French: native

English: B1 (CLES 1, 2012)

Spanish: intermediate

AI engineer and software developer by training, I am returning to engineering after 16 years of customer advisory. Fourteen months of hands-on training and eleven real projects, including SortirIA, which I built on my own from start to production, taught me to design, evaluate and deploy LLM-based solutions. With the same courage and determination, I now feel ready to join your company and fully commit to it.

AI PROJECTS

SortirIA · AI event assistant, in production — Oct 2026 – present

- Live at sortiria-montpellier.fr: a RAG assistant I designed and deployed on my own to find real events around Montpellier, with a nightly LangGraph collection agent, hybrid search on PostgreSQL + pgvector, sourced answers by Mistral, FastAPI and Angular on Azure.
- Set targets before measuring: 98.7% of suggestions match the request (target 95%), 97.8% relevance (target 70%), LLM judge validated at 91.9% on 135 unseen cards.
- Built an evaluation gate that blocks deployment in CI, plus Grafana and MLflow monitoring, for about $10 per month.

Medical triage AI agent · LLM fine-tuning — Sep – Oct 2026

- Specialised Qwen3-1.7B with SFT then DPO (QLoRA, 6 GB GPU) to triage emergency patients as P1, P2 or P3: 453 of 500 cases correct, macro F1 90.6%.
- Tracked under-triage as closely as F1 (5.4%), diagnosed and fixed a failed first training run; served with vLLM behind a FastAPI service (1.13 s P95).

Credit scoring · MLOps — Apr – May 2026

- Compared four models and selected XGBoost, tuned with Optuna on business cost (a missed default costs ten false alarms): 85% of payment defaults detected.
- Served the model through FastAPI, tracked with MLflow and Evidently; cut P95 latency by 18%, to 9.2 ms, by trimming logs.

Other projects — 2025 – 2026

- LangGraph chess agent with 1,029 tests · multi-source data collection orchestrated with Airflow · FAISS RAG evaluated with RAGAS · semi-supervised computer vision on brain MRI.

PROFESSIONAL EXPERIENCE

IT Sales Advisor — 2009 – 2025
Auchan Retail, Sète, France

- Advised customers for 16 years: needs analysis, explaining technical topics, managing the department and suppliers. On training leave since 2025.

Software Developer, then IT Project Manager — 1998 – 2006
Montpellier and Tenerife

- SQL, Visual Basic and WinDev analyst programmer at Alternative Informatique (1998 – 2001), project manager at Spiral Informatique (2001 – 2002), self-employed IT consultant in Tenerife (2002 – 2004), fixed-term analyst programmer at Store System Services and Helios (2004 – 2006).

EDUCATION

AI Engineer — 2025 – 2026
OpenClassrooms · Master's-level degree (EQF 7) in Data Science and Engineering

Bachelor's degree in Education Sciences, with merit — 2011 – 2012
Université Paul-Valéry

State Diploma, Specialised Technical Educator — 2006 – 2009
IRTS Montpellier

Web Developer — 2004
AFPA

Higher Technician in Business IT — 1997 – 1998
AFPA

French Baccalaureate, Science (mathematics and physics) — 1994
